For work restrictions, we used an Occ Med flowsheet which was an added tab at the top of your menu bar. We use an occ med EMR for our dedicated occ med sites, but we use Epic for urgent cares that also see workers' comp."		Nicolette Davis PA	Nicolette.Davis@atriumhealth.org

This includes employee medical exams, disability benefits claim forms, notes from doctors, requests for Family and Medical Leave Act (FMLA) leave, requests for ADA accommodations, worker's compensation history, claims and related documents, fitness-for-duty results, functional capacity assessments, referrals concerning an employee's participation in the company's employee assistance program, results of drug/alcohol tests, reimbursement requests for medical expenses, health-related information about an employee's family members, and any documentation about past or present health, medical condition, or disabilities. This file would also contain health insurance enrollment, continuation forms and COBRA notices.

David Cockrum	visit template for new and follow-up Work Comp cases, but I'm not sure I can share it since we are in different mother ships (our hospital is a Community Connect site for Nebraska Medicine). But you are welcome to try to search it: . DSCINJURYNEW and .DSCINJURYFOLLOWUP If you are able to find these in search, you can then save them as your own and edit as you see fit. If you aren't able to find them, I can email them to you, but it will be a long document as I will have to provide the lists where there are list options. And then you'll have to re-write them by hand. So not ideal. But I'm happy to share.	dcockrum@frhs.org
