

DC field	Exhibits field	Notes							
<i>Note: this mapping is at the collection level.</i>									
dc:title	Title	Required in Exhibits portal							
dc:identifier	URI to the collection	Also used for link to original record and for thumbnail image.							
dc:description	Description	Required in Exhibits portal. Descriptions should have some indication that the item is an exhibit, to reduce confusion with like items in Primo searches.							

Exhibits field	Notes
Subtitle	These OAI-PMH feeds are based off of the one created for the Collections Portal, which uses simple Dublin Core. Subtitle can only be mapped to Title-alternative, which is a qualified Dublin Core field.
Tag list	This is a free-text field; Allyssa does provide a set vocabulary for users which correlate to the major searchable headings on the Exhibits page.
	These are more akin to subjects than repository names; if mapped in the future, should go to dc:subject.

DC field	Exhibits field	Notes				
<i>Note: these fields do not currently exist at the collection level in Exhibits (and as such cannot be harvested.) It may be possible to create a blanket local field that is applied to all items.</i>						
dc:rights	Would need local field in Primo possibly?	Apply single rights statement to all items or general copyright text that is on items.				
dc:type	Would need local field in Primo possibly?	Apply "Collection" to all items, will allow for faceting in type search and indexing of records by type.
