^Total Powers^																								

To Use this Spreadsheet:

Each Row represents a turn. The green boxes on each row are for you to fill in your state and actions. For the first two turns, you need to fill out the Green health fields with the Health of each minion on your board. From there, the spreadsheet can extrapolate the health and position for each minion on every future turn.

Then all you need to do is input your actions in the Action column, the number 0 representing passing your turn, numbers 1-7 representing hero power the minion in that position (Left to right).

At the bottom of the input column is a field that counts the number of times you use your hero power, and will warn you if that exceeds 15 (You only have 15 mana.)

Go through step by step, trying out different hero powers until there are no END squares in the future, and then you should be able to execute that plan in-game to succeed.
