Out of Scope

Showing the data for different time periods

Listing all the details for a transaction

add new (critical) state for transaction where keys were released, and transaction not included in slot -> Not included add button to re-submit transaction if in status not included (we won't be retrying transactions at some point) we don't have a design for the not found page, and the not found transactions

API authentification to discuss after MVP

Design improvement ideas

Make the search text more prominent (add maybe a text that says Looking for your transaction?)

REST Endpoints							
Get Number of successful Transactions
