

## Important Update!

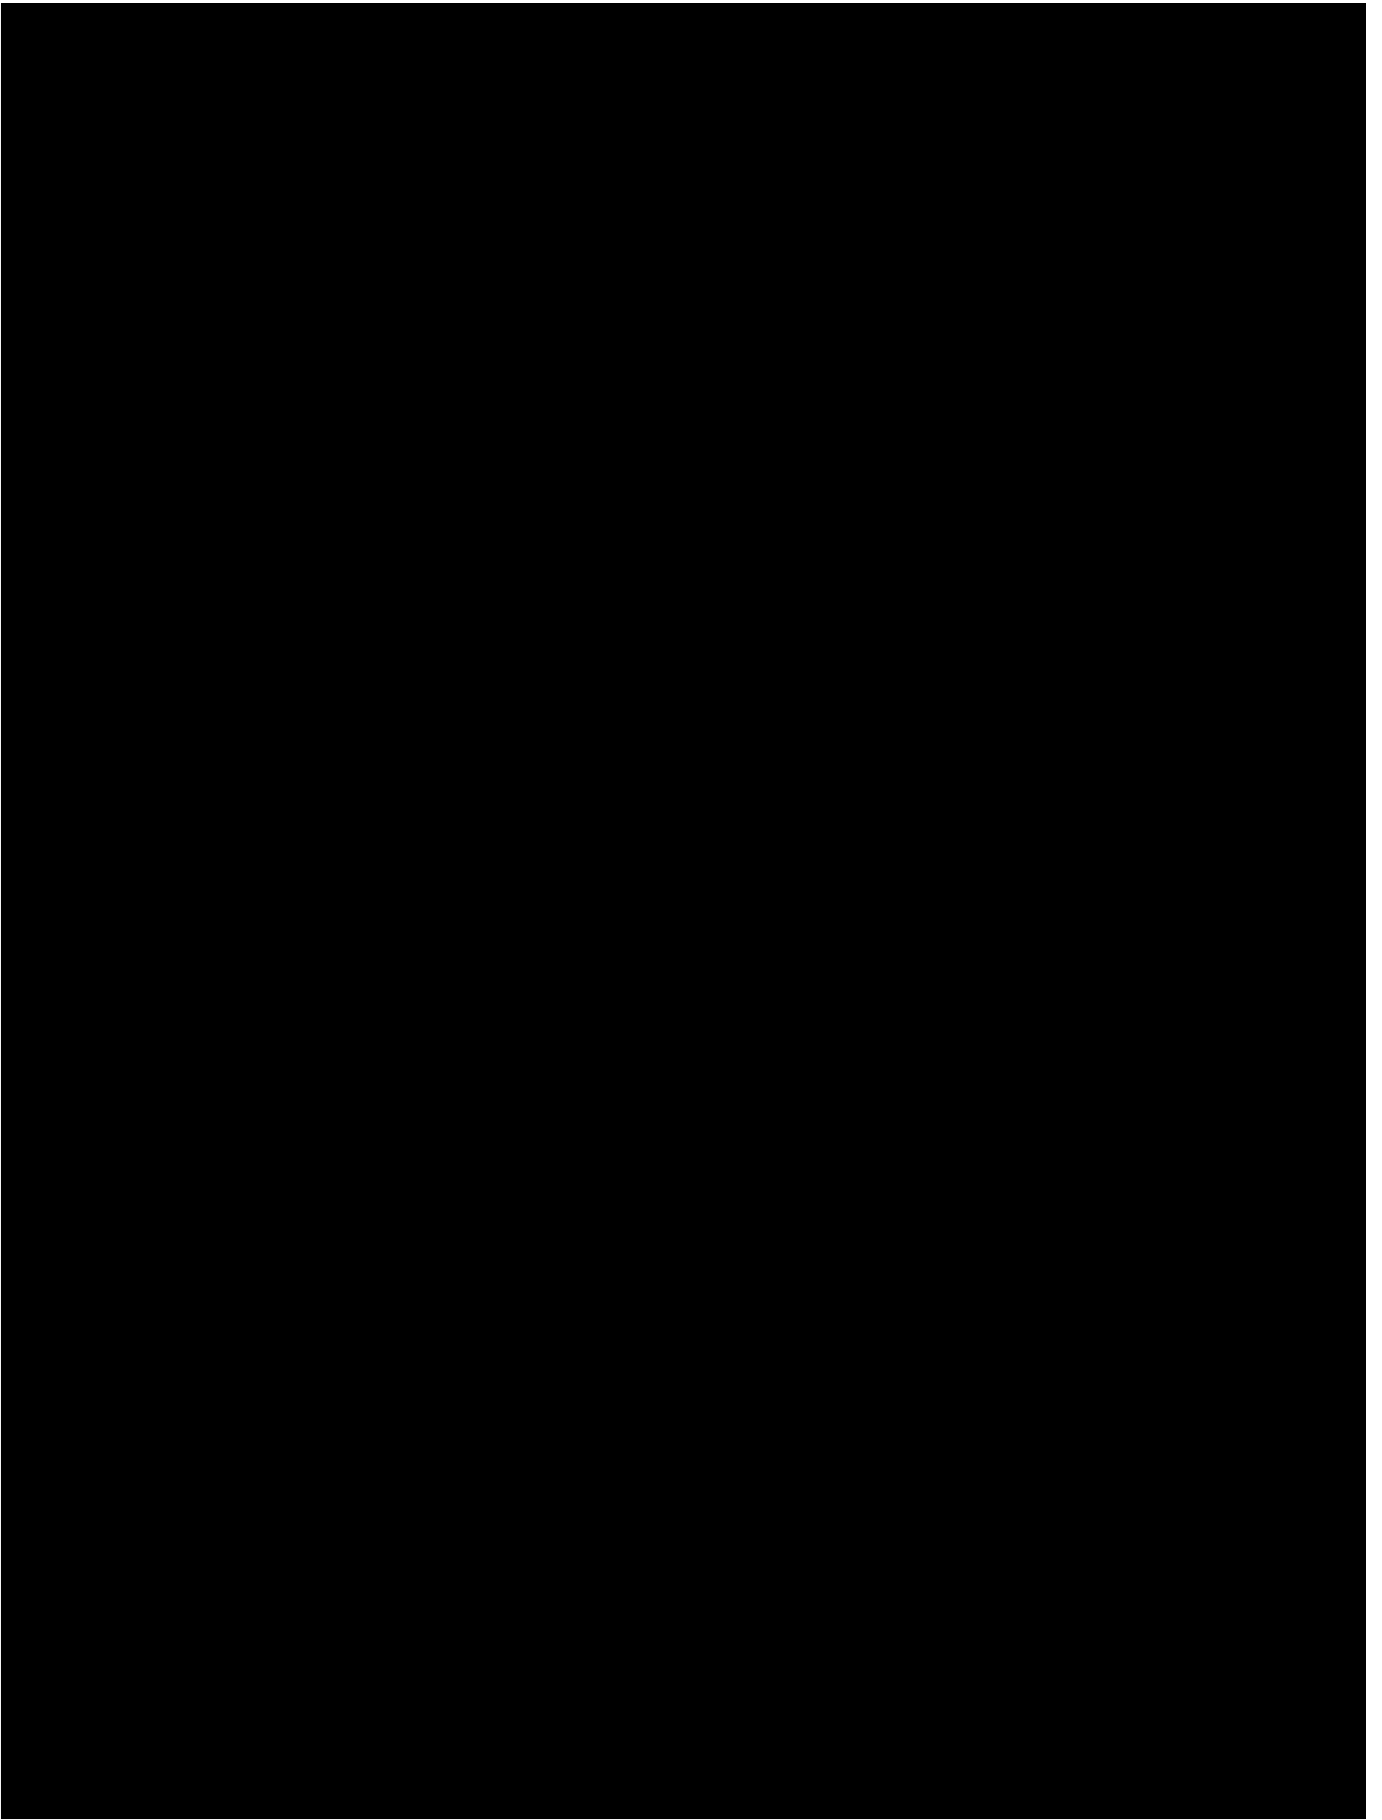

I no longer have the time to keep this spreadsheet up to date, so I will be unlocking it in the event that anyone is interested in updating it for further use.

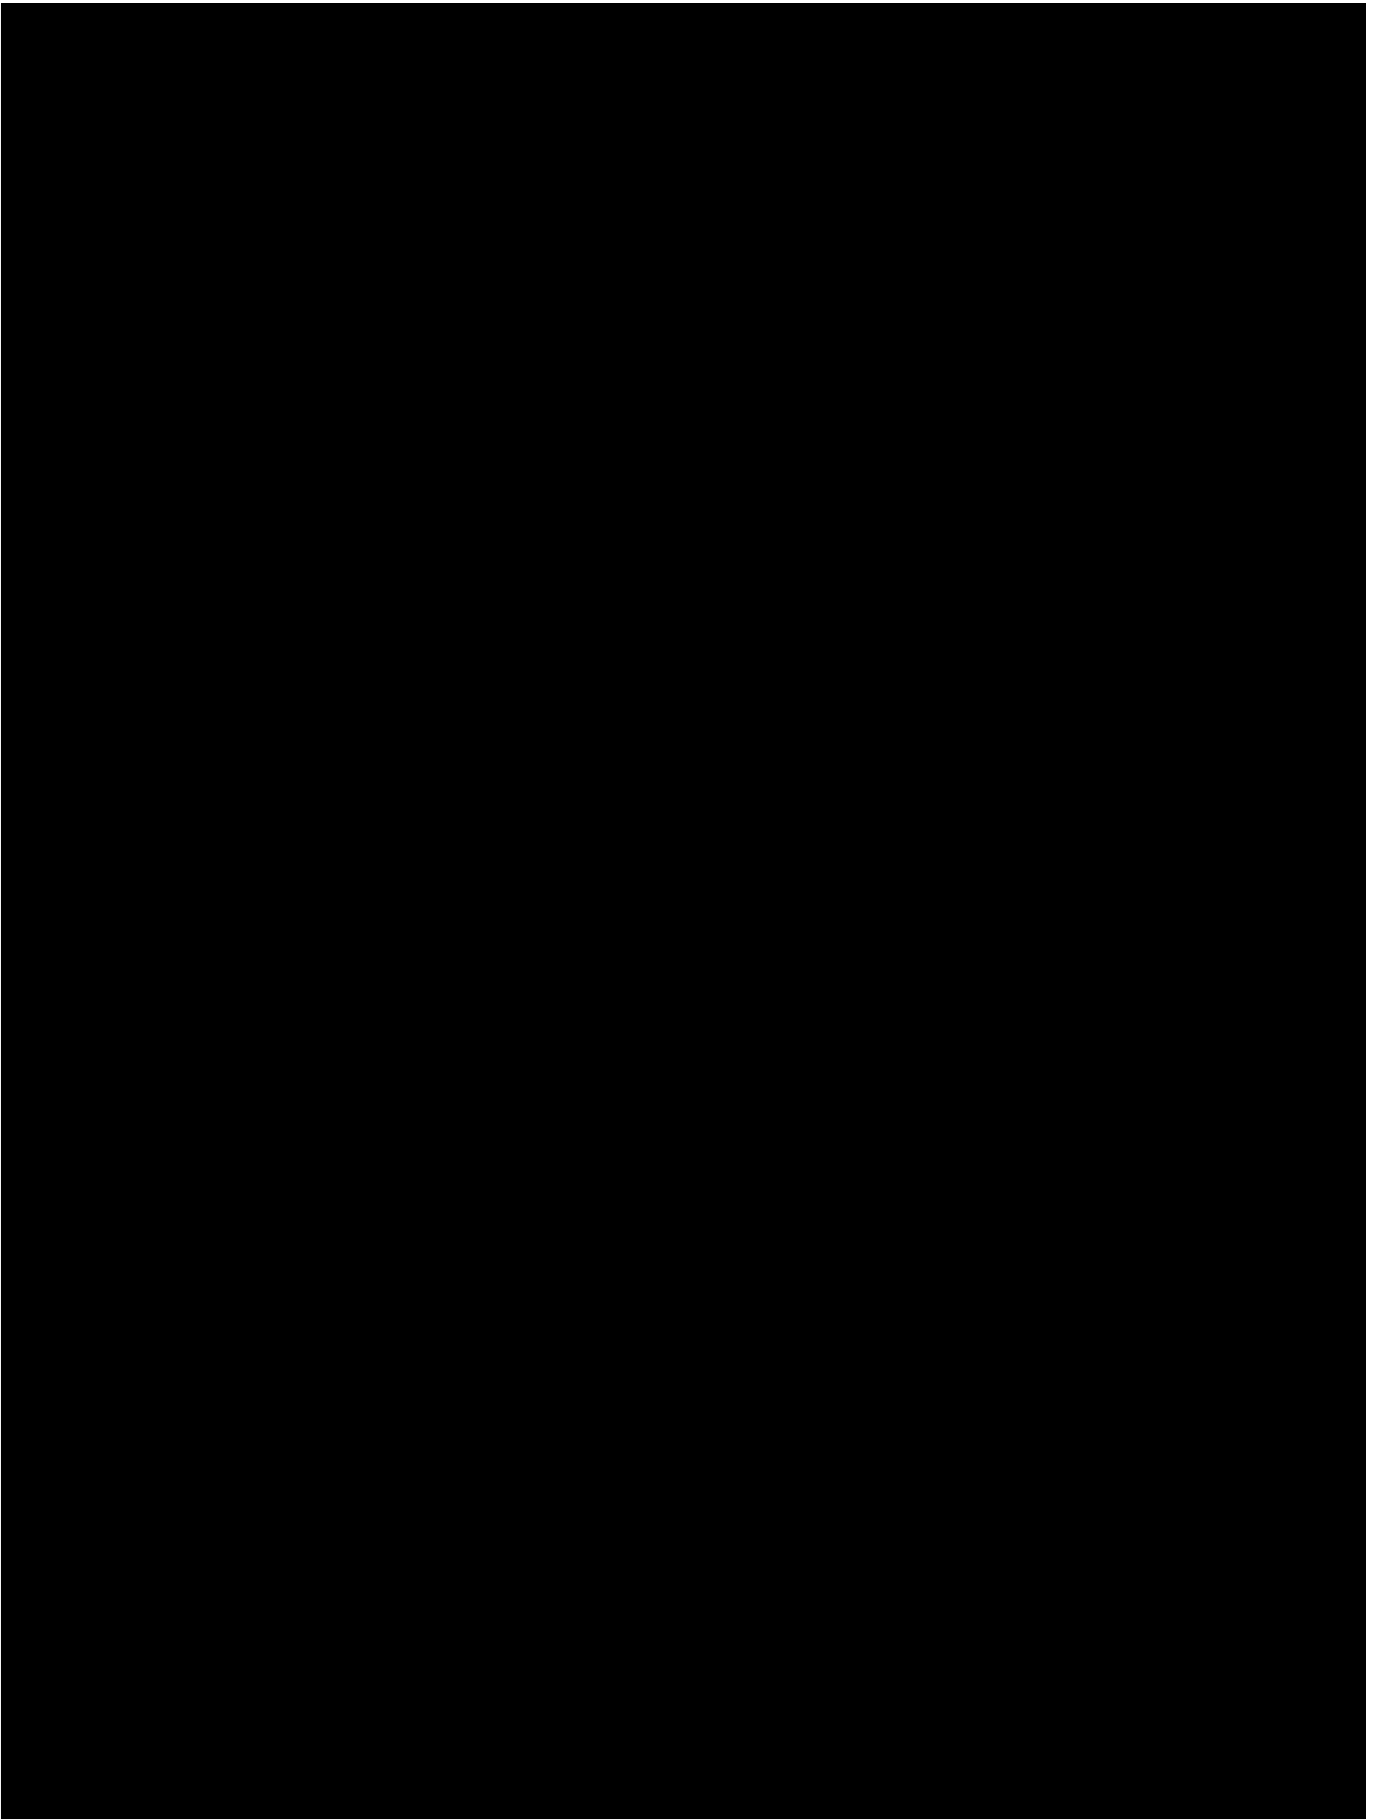

[Editor Access Link](#)

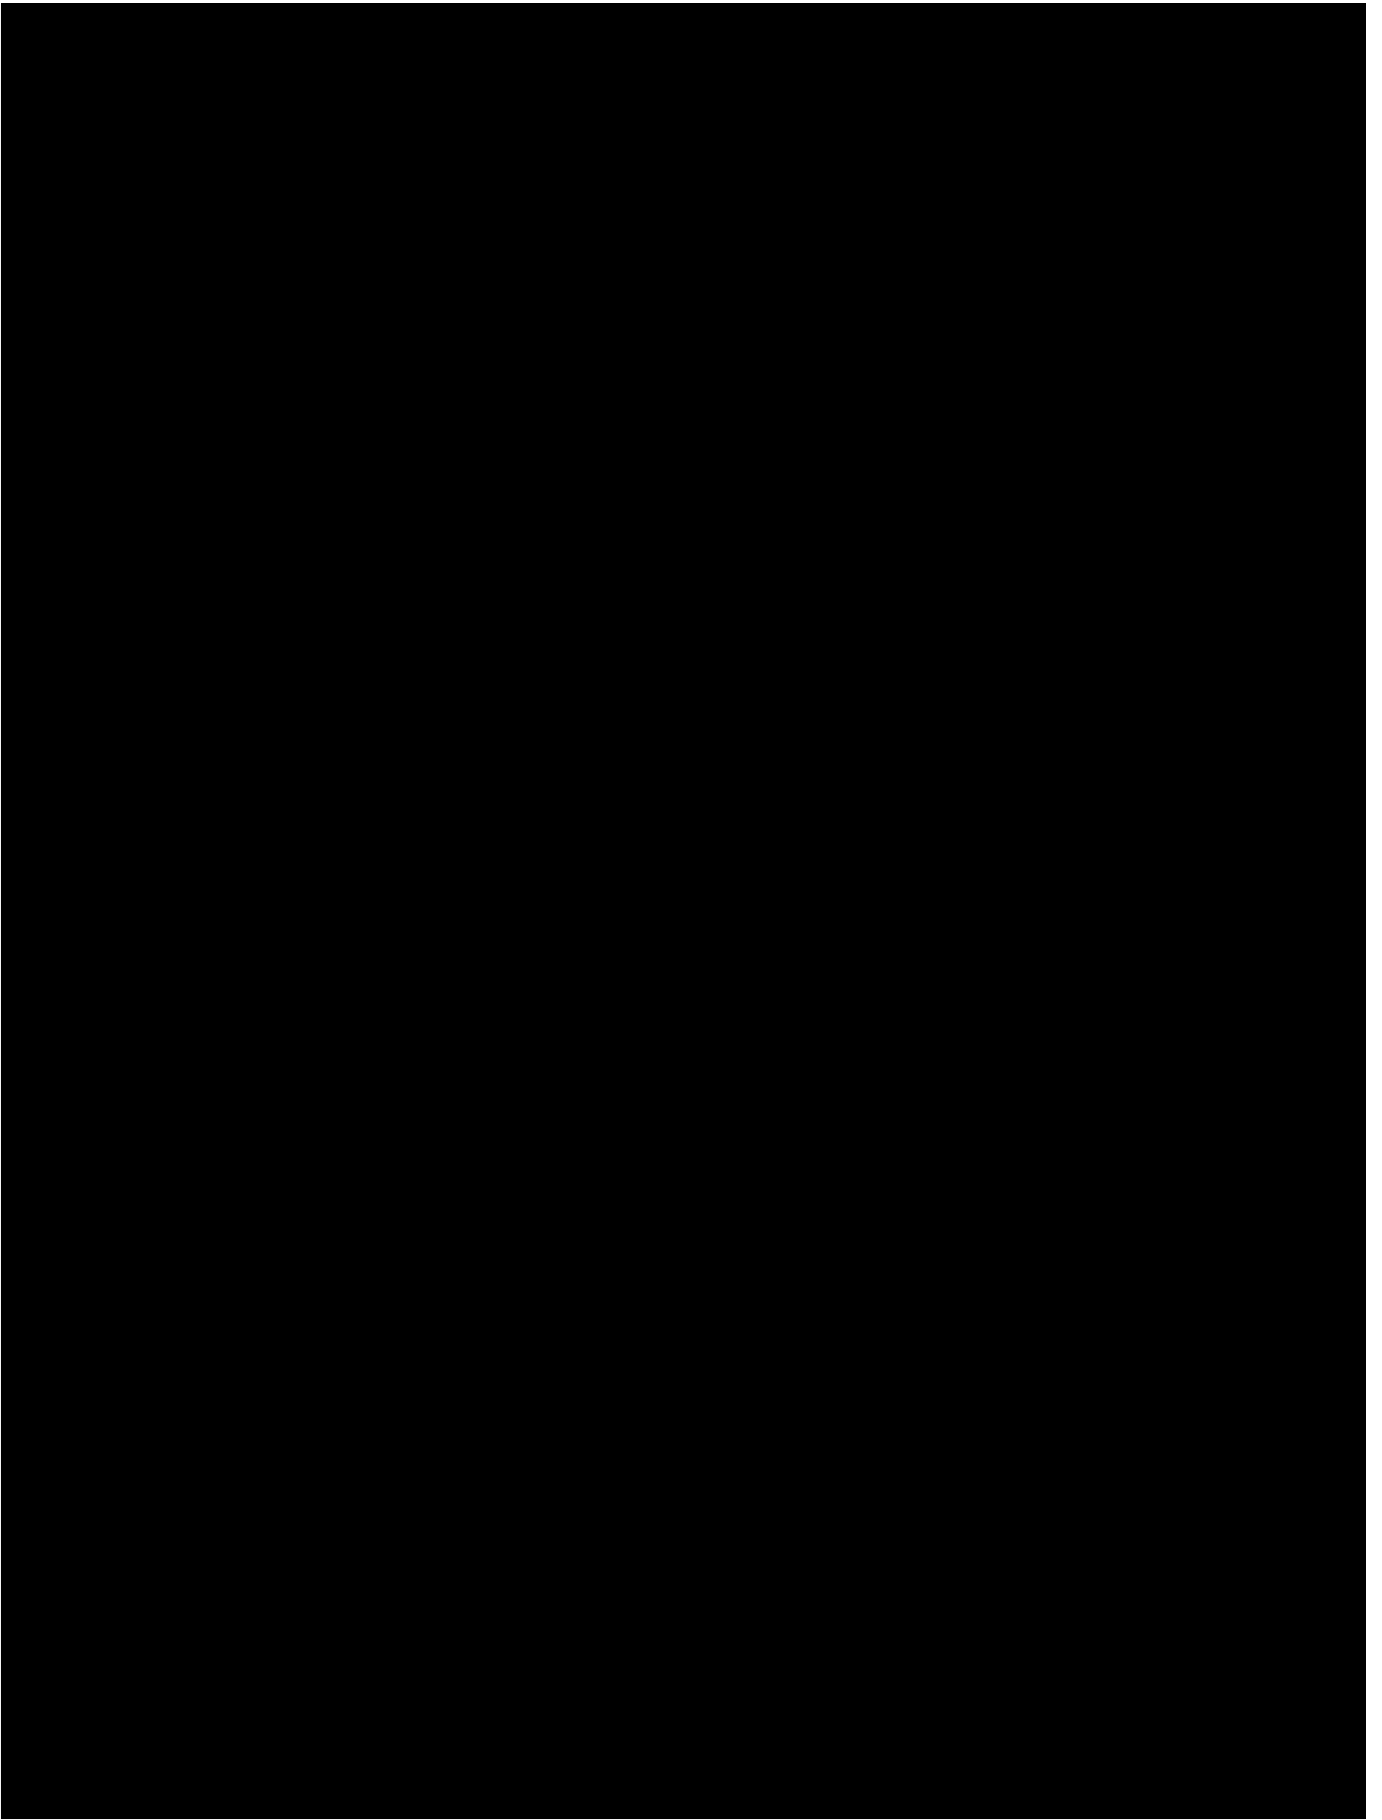

New Pokemon & Balance changes will need to be recorded with changes to scaling. This can be found on Unite DB.

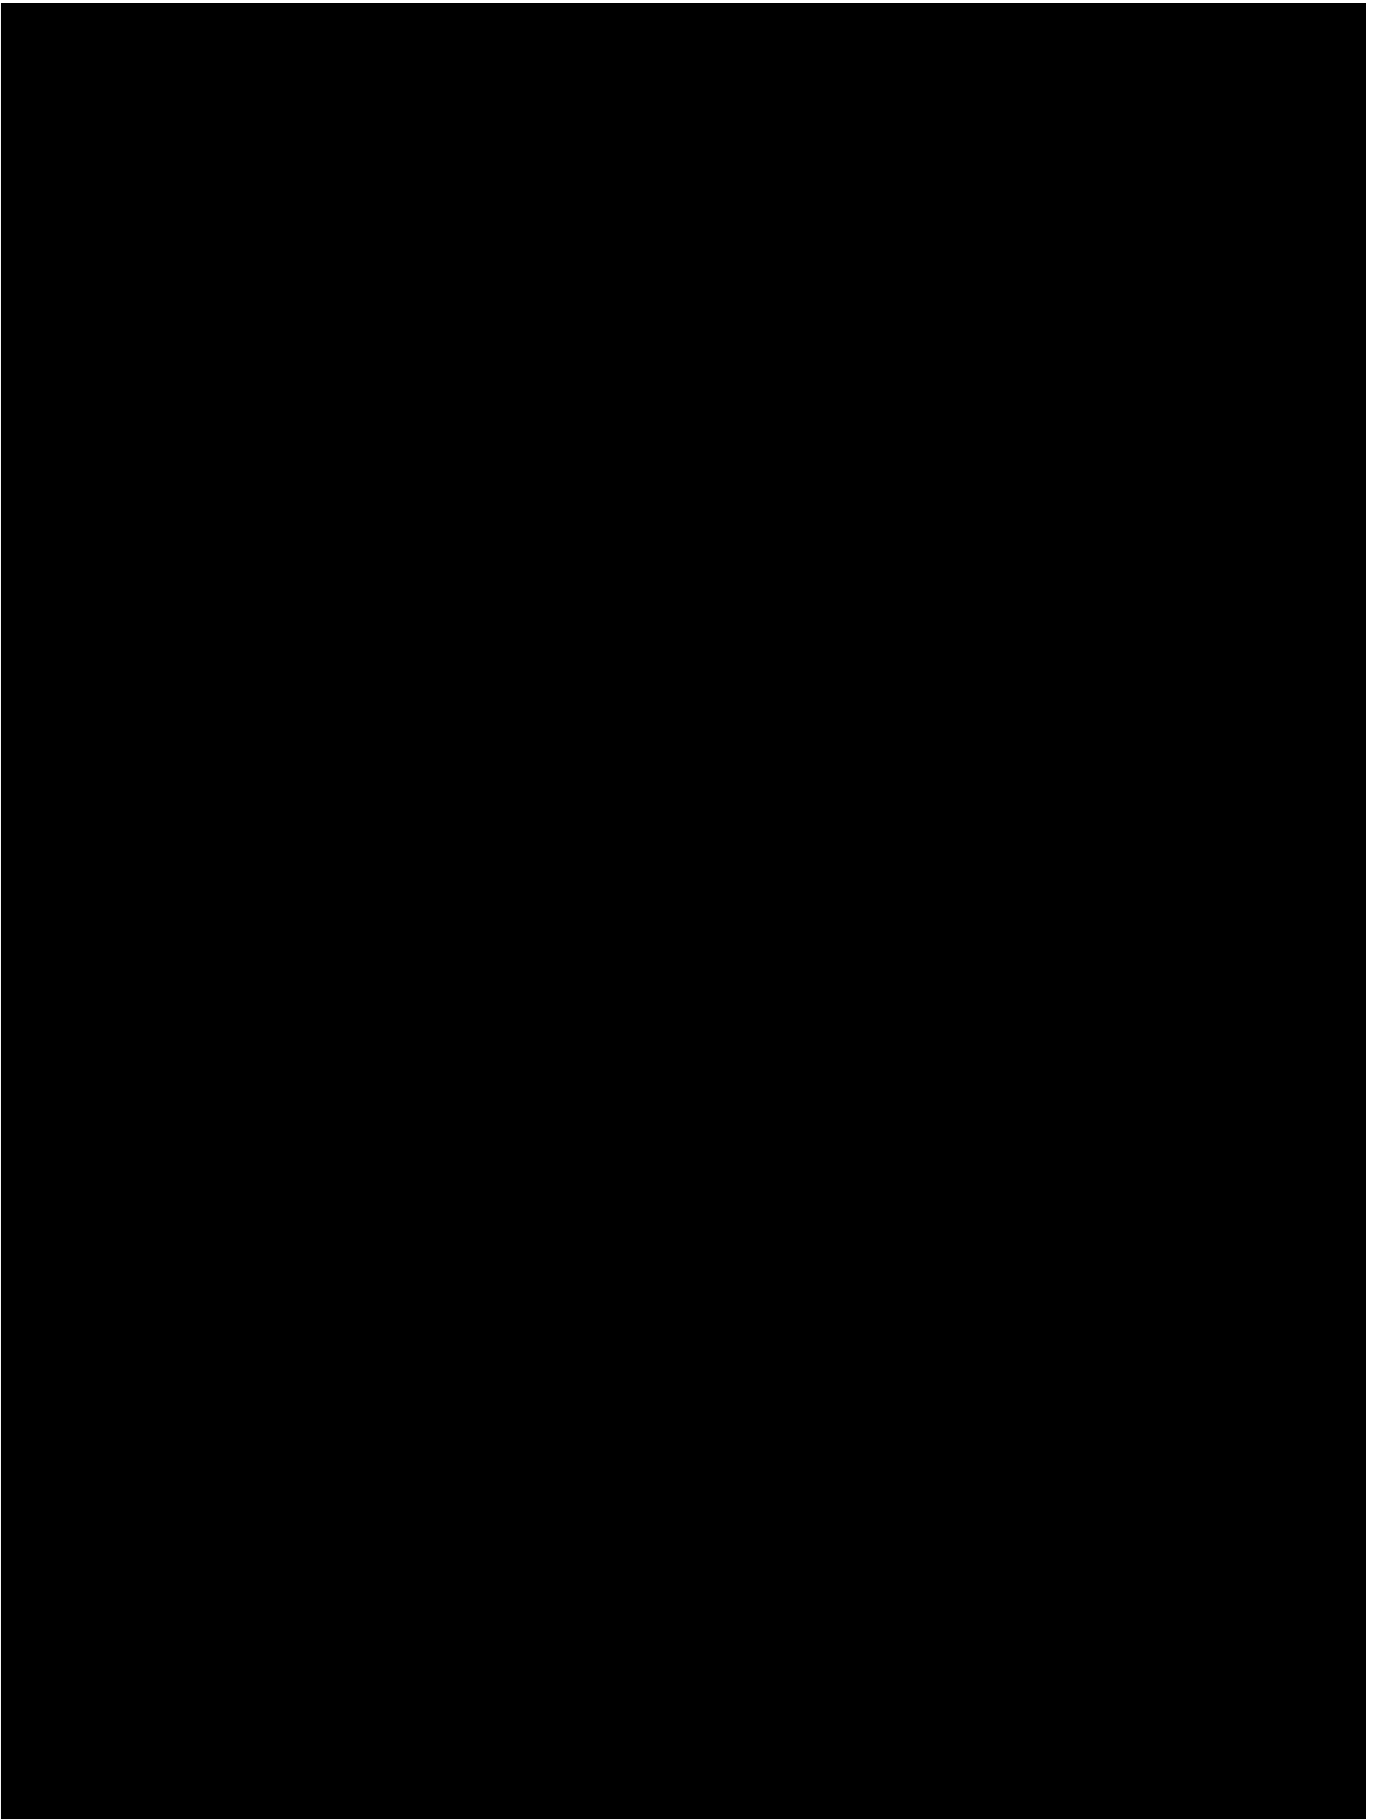

Please do not ruin the spreadsheet. You are more than welcome to create your own copy for your own use, or as a backup in the event of sabotage.

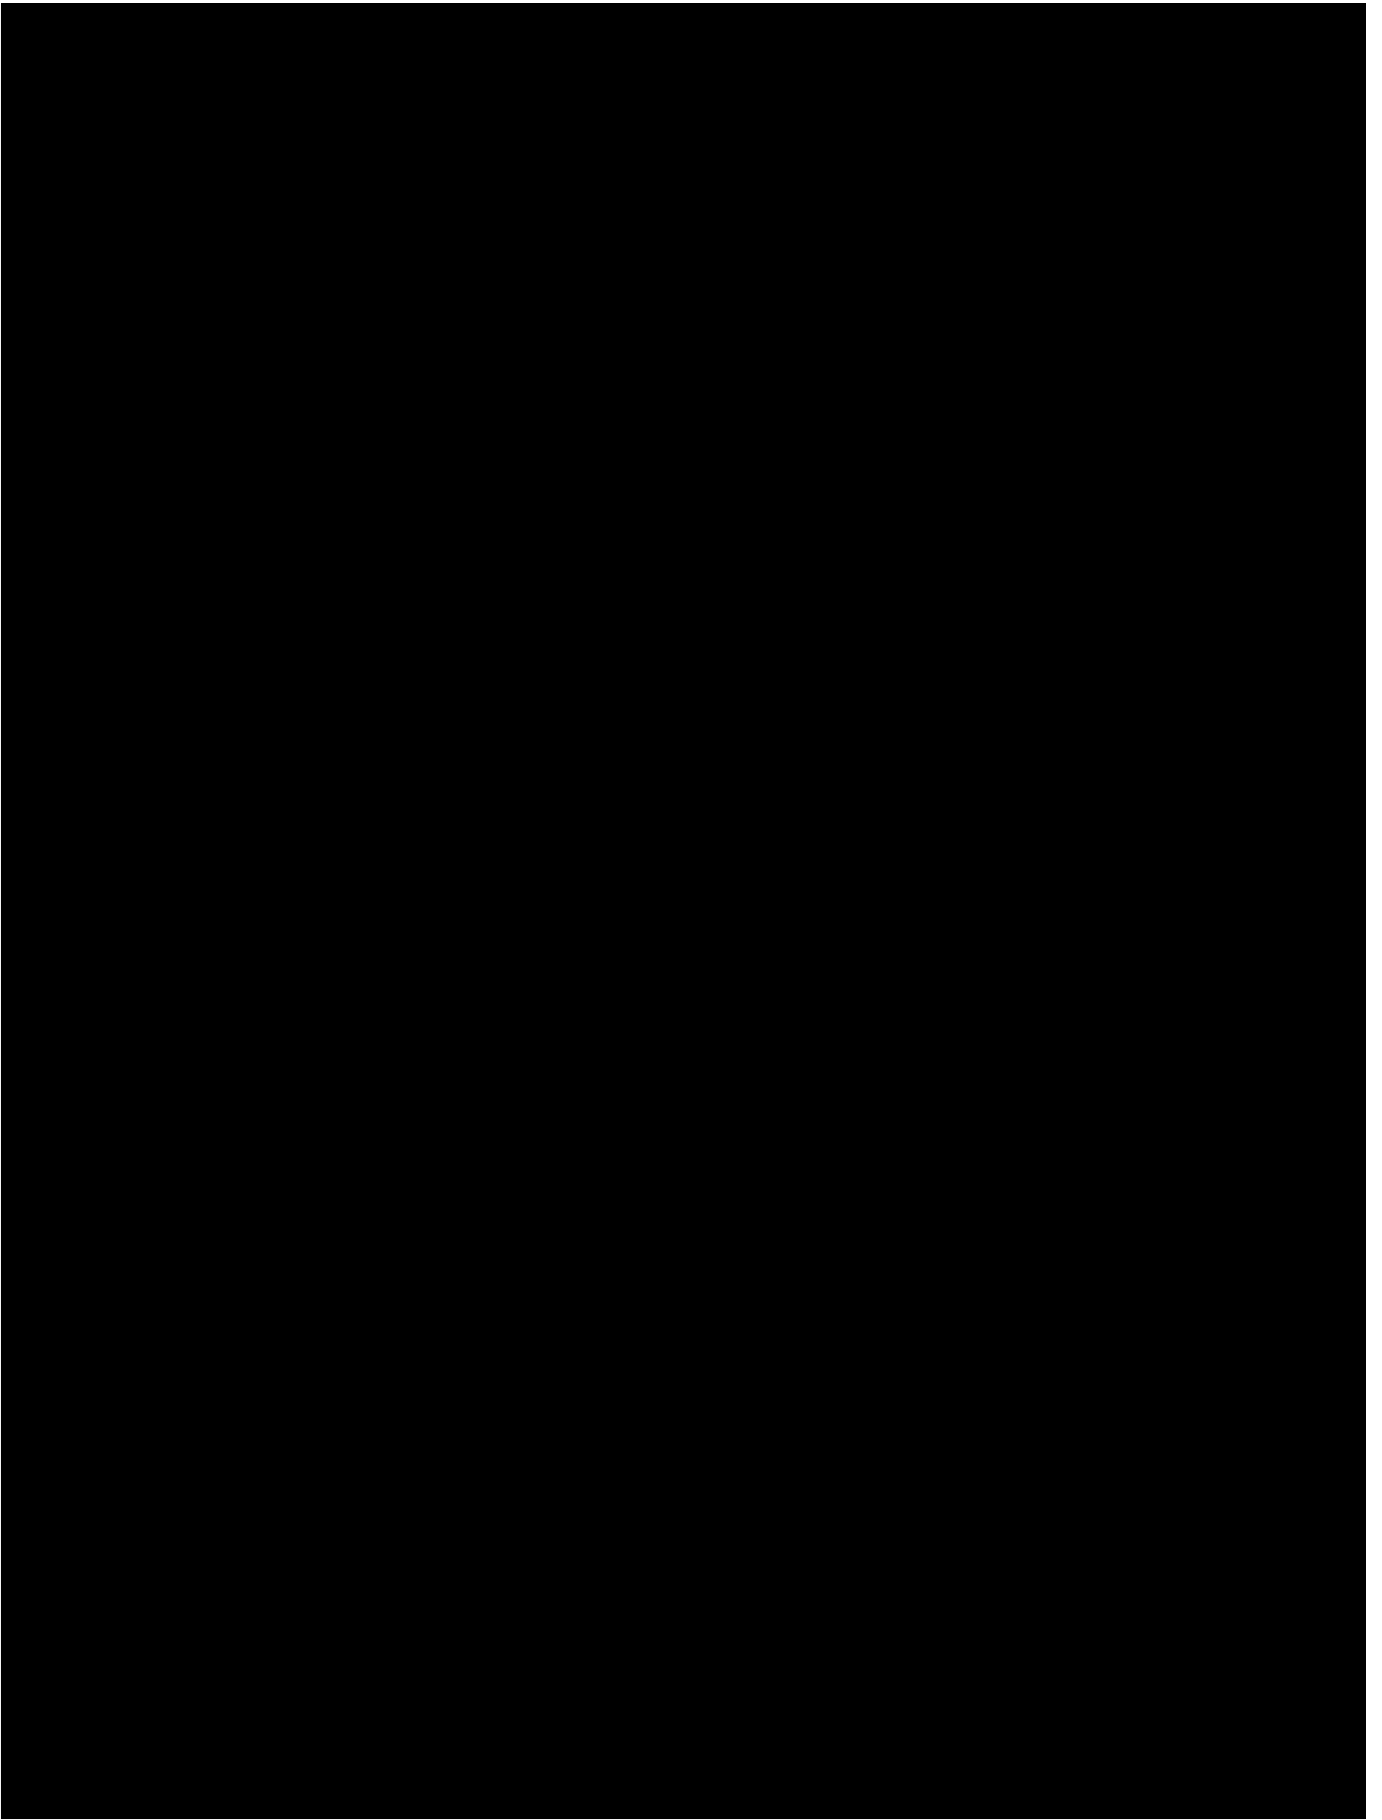

Thank you for your interest in this damage calculator. Enjoy your time in Pokemon Unite! - Hwaybert

Vespiquen & Combee Respawn*																	
Respawn time is set upon spawning.																	
Spawn time is 8:50, respawn 7:20.																	
If not defeated by respawn time, respawn will be skipped.																	
If respawn is skipped, it will respawn at the next interval, 5:50, etc.																	
Ok, so if we apply the drednaw exp scaling to a regular wild audino, does the scaling line up?																	
Let's look at audinos at 8:00, 7:00 and 6:00																	
Audino	Lvl	%Lvl	Exp	Expected	Without .6x	True Difference

12	40				22%		409.2			10.23							
14	50				15%		400.5			8.01							
Hypothesis: Perhaps exp awarded from scoring is capped at 400 based on your points scored relative to your current point carry cap.																	
This would mean not only is scoring in the early/mid game more impactful, but smaller scores in the early game are particularly strong.																	
Also from an exp perspective, we can determine the point at which it is efficient to cap vs farm.																	
Not only is it more reliable to cap your points low, as the time required decreases, but there may be diminishing returns for additional points scored.																	
The point at which the exp reward outweighs the opportunity cost of farming would be very useful to know.
