## Please note there are two datasets included in this spreadsheet:

- 1) <u>Publication timing policy</u>: This spreadsheet includes the data used for the analysis of expected CSAS publications relative to the CSAS timelines policy (CSAS 2012) policy. It contains a record per expected document from all CSAS meetings held from 2017-2021 and associated date the documents were published as of July 1st the following calendar year (see methods section of appendix titled "The Timeliness of Scientific Information in Support of Sustainable Management of Canada's Fisheries and Oceans"). Please note the the CSAS schedule export tool changed the date format of its provided "START\_DATE" and "END\_DATE" fields starting with the 2020 records. These remain as provided here, and it is suggested the data be imported into data analysis software in two steps. First with records from meetings held in 2017-2019, then the 2020 meeting records. Then convert within the analysis program these fields to a common date type and merge together again. Field definitions can be found in the sheet "Field definitions policy".
- 2) Science advice and decisions: This spreadsheet includes the data used for the analysis of the timeliness of the publication of Science Advisory Reports (SAR) and Science Responses (SR) relative to fishery management decision posting on the Fisheries Management Decisions website (https://www.dfo-mpo.gc.ca/fisheries-peches/decisions/index-eng.html). It contains a record per expected SAR and SR from all CSAS meetings held from 2017-2021 for stocks and regions expected to be included on the Fisheries Management Decisions website, associated date the science advice reports were published, and date of associated fisheries management decision posting on the website (if applicable and available), as of July 1st, 2021 (see methods section of appendix titled "The Timeliness of Scientific Information in Support of Sustainable Management of Canada's Fisheries and Oceans"). This dataset is a subset of the data in the "Publication timing policy" spreadsheet, but with the addition of the timing of associated decisions and publications up to July 1st, 2021. Please note the the CSAS schedule export tool changed the date format of its provided "START\_DATE" and "END\_DATE" fields starting with the 2020 records. These remain as provided here, and it is suggested the data be imported into data analysis software in two steps. First with records from meetings held in 2017-2019, then the 2020 meeting records. Then convert within the analysis program these fields to a common date type and merge together again. Field definitions can be found in the sheet "Field definitions decisions".

"Publication timing policy" sheet field definitions:
