Notes:

-Enter material reward for the **first day** from the dropdown list, the worksheet will then determine and display the rewards for remaining days (2-7)

Here's a quick rundown of how the reward structure works (from the developer);

- Race rewards in special events almost always follow the same pattern in terms of which stat a material is for (race 1 = top speed common, race 2 = acceleration common and so on)
- Between special events, generally the only difference in the rewards is which of the parts is the "primary" for each of the three stats (e.g. if the engine is the "primary" part for the top speed category, the race 1 reward will be a flywheel)
- This is why you see a lot of events with similar reward lists, but really the only difference between them functionally is which parts will best benefit from an extra conversion kit from the store
