

Question	Subject 1	Subject 2	Subject 3
What do you like about this application?	I like the simplicity. It's well labeled. Moves the accountability for finding rooms from staff to student.	I like that is would make my job easier.	It serves to answer the #1 question from students. I like the size of the map. I could use it to explain directions without searching for a room
What don't you like about this application?		I recognize the map of the basement. But if I were a student I don't know what floor that is at a glance.	
What do you like about the design/layout?	The simplicity - I would find a color coded map overwhelming as an unfamiliar student		
What don't you like about the design/layout?		It's unclear if you search by course number / title / and instructor? Do you need all or one or two or three?	I am used to the color version we give out to students. I think it is helpful that it depicts each department
Can you tell what you are supposed to do starting from the main page?	Yes, I need to chose a subject or room number, not sure if I have to put in my instructors name or not. (Just by looking.)	Agree	Agree
Which do you think you will use more to help students locate their classroom? Search by class or search by room number?	Room number	Room number	Room number
Do you think this will be helpful for student workers when aiding a lost student?		Yes, definitely	Yes, definitely
Are there any missing features that you would like to see?	Targeted applications such as this should be simple to use. I would personally look for classes before the week before the term started. User needs to be able to select term or at least show which term the class assignment is for. Would like to see confirmation of the term or indication that it has been updated for next term	Some sort of indication if the class being searched for is not in EB or FAB.	
Do you think a different version of this would be useful as an application available directly to the student?	Yes a student smartphone app would be useful. Also consider a kiosk / touchscreen.		I am super selective about what apps I put on my phone. So I wouldn't likely download an app, but I would like an easy way to access a mobile website (QR scan, visible shorturl etc.).
Would you like to use this application on a desktop, tablet, or mobile device?	Agree	Students would prefer phone	As a student services worker - computer. As a student - phone.
<b>Additional Comments / Questions:</b>			
RE: device interface / technology	How does the map locate where you are? Is it mapped to the room? Or can it find me if I use it on a mobile device?		
RE: written directions		Written directions need to indicate floor #. Many students don't know what floor to go to.	Written directions should indicate room markers (i.e. room numbers for changes in direction)
Do you prefer written or map?	Map - it's the simplest way to convey information	Map, millenials don't like to read	Combo, mostly map. We only give maps to students, we don't give written directions.
RE: course subject drop-down menu			Subject drop down - need to include EAS classes. Any subject that MCECS teaches. Acronyms should be defined.
When giving verbal directions what do you say (FAB 10)?		Street directions if possible (FAB 10) in basement focus on landmarks. Quicker route may be to go outside and enter a new door.	Recommend outside first. Easier to direct to other entrance than explain the basement. Warn that basement is a maze.
Sending directions - useful?	Super useful - especially for students looking up classes from home. Mobile website might be enough	Yes, love that we can send it straight to students	Yes, definitely
RE: EB / FAB landmarks and 'unoffical' rooms			Offer landmarks on map. "CAT" "CS Tutors" "Fishbowl" "Circuit Lounge"
