StandardName	Definition	SimpleDataType	SugMaxLength
UniversalParcelId	The URN-based RESO Universal Parcel Identifier (UPI) is a unique identifier for all real property on an international level. It is based on country and local identification methods and is limited to real property.	String	255
CountrySubdivision	A component of the UniversalParcelID, created with a country-specific formula identifying the country subdivision of the authority that issued the parcel number. In the U.S., GEOIDs are used. In the EU, NUTS is used. Other countries may have their own country subdivisions.	String	128
ParcelSubcomponent	A number used to identify smaller elements of a parcel (e.g., parking spaces, outbuildings, air rights).	String	128
