<b>Sources</b>	
<b>Election results</b>	All election results are <a href="#">from Dave Leip's Atlas</a> and include write-ins but not undervotes or overvotes.
<b>Population Data</b>	Population totals are from the U.S. Census Bureau. Decennial census population counts are used for years ending in zero, while all other years use annual census population estimates.
<b>Methodology</b>	
<b>Proportion of Population Represented</b>	The proportion of the national population represented by each party is calculated by adding up the population in each seat represented by a given party and dividing the sum by the 50-state population. Since each state has two seats, the total number of people for each party will be double the actual population, but proportions only add up to 100%.
<b>National Aggregate Party Votes</b>	Three-cycle aggregates for any given election year are constructed by adding up all votes in the most recent election across all 100 Senate seats. Thus, the 2024 aggregate would include the most recent election for every seat from 2020-2024, including any non-concurrent special elections that may have taken place since 2020 or 2022 for seats that were regularly elected in those years.
<b>Uncontested Seats and Top-Two or All-Party Primaries</b>	<p>Seats that lacked one candidate from both parties on the ballot and/or contained multiple candidates from one party present complications for creating a reliable aggregate of the national popular vote, stemming from if one party did not field any candidate or if a state used an alternate electoral system to traditional party primaries. In states that allow multiple candidates from the same party on the November ballot, all candidates for a given party are included in the national aggregate of party votes only if the electoral system allows all major parties on the ballot. Thus, additional same-party candidates are included in Alaska's first round of ranked-choice voting and Louisiana's all-party primary but not in California's or Washington's "<a href="#">top-two</a>" systems, where one party can win both spots on the "top-two" general election ballot. These candidates are noted on the <a href="#">Adjustments by Year</a> tab.</p> <p>Uncontested seats and those without one major party's candidate can additionally skew the national aggregate vote if one party's uncontested seats represent a significantly larger share of the population than the other party's, which is why we have calculated these proportions on the <a href="#">Summary</a> tab for a given year to note in the context of the national aggregate, which does not account for these seats or top-two races except for in 2016-2022. In those years, the secondary top-two Democrats in California have been excluded from either party's national aggregate vote, though Democrats still won a majority of votes even without the secondary California Democrats.</p> <p>Accounting for elections such as the above by imputing estimated vote totals for missing parties would present a more realistic view of the national aggregate and be consistent with approaches taken by political scientists to dealing with similar U.S. House or state legislative data. However, we have avoided doing so here for simplicity and because it likely would not have caused a change in the party that won the most votes nationally in elections we have included thus far, although it could do so in the future.</p>
<b>Independent Partisans</b>	In states such as Maine and Vermont where independent senators who caucus with a major party or candidates who have for all intents and purposes taken over as the de facto candidate for a major party, such candidates are included as "independent Democrats/Republicans" in the national party aggregate. These candidates are noted on the <a href="#">Adjustments by Year</a> tab. Truly independent and third-party candidates such as Greens or Libertarians are categorized separately and not included in either party's national aggregate vote.
<b>Special Elections</b>	Special elections that were held concurrently with the November even-year general election for seats that otherwise would not have been up that year are included on the year tab that contains those elections by state. Special elections for the remainder of a term that coincided with the regular election for a full term are not included to avoid double counting. Special elections that were held on separate dates are included separately on the <a href="#">Special Elections</a> tab. The <a href="#">Adjustments by Year</a> tab includes the calculations for which regularly scheduled elections are to be removed from the national aggregate vote in a given year and replaced with the most recent special elections for those same seats.

**Mid-Session  
Changes in Party**

Some sessions of Congress [have seen members switch parties between elections](#), but these party changes are not taken into account in the national aggregate of votes or population represented, since the figures look at the partisan balance at the time of the regular general election in a given year. Thus, two Democratic-to-Republican party switches in Alabama and Colorado in the immediate aftermath of the 1994 elections are not included, but even doing so would have still left Democrats representing more people than Republicans that year. Republicans are also noted as having initially won Senate control on Election Day in 2000 despite Democrats regaining control following a party switch in May 2001.
