s	Spec section	Number of tests	Test behavior	Tested in
All		378		
1. Introduction		0	No normative statement to test	
2. MediaSource O	<u>bject</u>	1	calling MediaSource object constructor without arguments returns a non-null object	
		1	calling MediaSource object constructor with arguments returns a non-null object	
			EventTarget: addEventListener can be called	
			EventTarget: removeEventListener can be called	
3 4 Madia Causas			EventTarget: dispatchEvent can be called	
2.1 MediaSource r	eadyState		readonly the value is "closed" when not yet attached	
			the value is "closed" when not attached anymore (already tested during	
			detachment) the value is "ended" (already tested with endOfStream tests)	
2.1 MediaSource s	sourceBuffers		readonly	
			SourceBufferList tests	
			contains no value when readyState is "closed" at creation	
			contains no value when readyState is "closed" after detachment contains values when readyState is "ended" (if contained value before)	
			contains at least as many SourceBuffer as in activeSourceBuffers (already	
2.1 Madia Source	activeSourceBuffers		covered by tests on enabling/disabling tracks) readonly	
L. I WediaSource &	active Source Bullets		SourceBufferList tests	
			uses the same order as sourceBuffers (already covered by tests on	
2.1 MediaSource of	duration		enabling/disabling tracks) the value is NaN when MediaSource is created	
			the value is NaN when MediaSource is cleated the value is NaN when MediaSource is closed (after detachment)	
			change of value after media changes (appendBuffer, appendStream,	
			endOfStream) setting the value to <0 throws in all states (open, closed, ended)	
			setting the value to NaN throws in all states (open, closed, ended)	
			setting the value to a positive value throws in closed and ended	
		1	setting the value to a positive value throws if any sourceBuffer is updating setting the duration to the same value fires no event (updatestart, update,	
		1	updateend or durationchange)	mediasource-duration.html
		1	setting the duration to a smaller value, removes frames (audio, video, text) and fire events	
			setting the duration to a smaller value that does not match the end of an	
		1	audio frame or text cue, fires event and actually sets the value to a different value from the given one	
			the value can be set to +Infinity	
2.2 MediaSource a	addSourceBuffer()		call with a null argument throws an exception	
			call with no argument throws an exception call with an empty argument throws an exception	mediasource-addsourcebuffer.html
		'	call with an unsupported mime type value (e.g. random value) throws an	mediasource-adusourcebuner.num
		1	exception	mediasource-addsourcebuffer.html
		1	adding a large number (e.g. 100) of SourceBuffers throws a quota_exceeded_error	
Chrome-specific b	obavior	1	adding one buffer, appending an init segment, adding another buffer throws quota_exceeded_error	
OTHORNE-SPECIAL D	Cilavioi		calling when readyState is "closed" throws an exception	
		1	calling when readyState is "ended" throws an exception	
			calling with a type corresponding to a supported byte stream format with "generate_timestamp_flag" set to true returns a non-null SourceBuffer, with mode set to "sequence", that an addsourcebuffer event is fired and that the	
		1	SourceBuffer is present in sourceBuffers calling with a type corresponding to a supported byte stream format with	
		1	"generate_timestamp_flag" set to false returns a non-null SourceBuffer, with mode set To "segments" that an addsourcebuffer event is fired and that the SourceBuffer is present in sourceBuffers	
2.2 MediaSource	endOfStream()		call with a null argument throws an exception	mediasource-endofstream-invaliderror.html
		1	call with a random error argument throws TypeError calls with (no value, "decode", "network") when readyState is "closed" throw	2 tests in mediasource-endofstream-invaliderror.html
		3	an exception	
		3	calls with (no value, "decode", "network") when readyState is "ended" throw an exception	
			calls with (no value, "decode", "network") when one sourceBuffer is updating,	
		3	throws an exception when the duration of the buffers is equal to the MediaSource.duration, the	
		1	duration is unchanged after the call	
			when the duration of the buffers is greater than the MediaSource.duration,	
			the duration changes to a greater value (other duration change algorithm	
		1	the duration changes to a greater value (other duration change algorithm paths are not possible)	
		1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to	
		1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK,	
		1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle	
		1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=true, fires error and updateend events, updating changes to false	
		1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=false, no appendBuffer done yet, fires an error event on the video element, video.error =	
		1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done aiready, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=false, no appendBuffer done yet, fires an error event on the video element, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source	
		1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=false, no appendBuffer done yet, fires an error event on the video element, video error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=false, some appendBuffer done already, fires an error event on the video, video.error = already, fires an error event on the video, video.error = already, fires an error event on the video, video.error = already, fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video.error = already fires a	
		1 1 1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=frue, fires error and updateend events, updating changes to false call with type = "decode", with updating=false, no appendBuffer done yet, fires an error event on the video element, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=false, some appendBuffer done already, fires an error event on the video, video.error = MEDIA_ERR_NETWORK, networkState = idle	
. 2 MediaSource i	sTypeSupported()	1 1 1 1 1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=false, no appendBuffer done yet, fires an error event on the video element, video error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=false, some appendBuffer done already, fires an error event on the video, video.error = already, fires an error event on the video, video.error = already, fires an error event on the video, video.error = already, fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video, video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video. video.error = already fires an error event on the video.error = already fires a	
2.2 MediaSource i	sTypeSupported()	1 1 1 1 1 1 1 1 1 1 1 1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED. call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=frue, fires error and updateend events, updating changes to false call with type = "decode", with updating=false, no appendBuffer done yet, fires an error event on the video element, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=false, some appendBuffer done already, fires an error event on the video, video.error = MEDIA_ERR_NETWORK, networkState = idle void return	
2.2 MediaSource i	sTypeSupported()	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=talse, no appendBuffer done yet, fires an error event on the video element, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=false, some appendBuffer done already, fires an error event on the video, video.error = MEDIA_ERR_NETWORK, networkState = idle void return call with a null argument throws an exception call when type is empty string returns false	
2.2 MediaSource i	sTypeSupported()	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED. call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=frue, fires error and updateend events, updating changes to false call with type = "decode", with updating=false, no appendBuffer done yet, fires an error event on the video element, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=false, some appendBuffer done already, fires an error event on the video, video error = MEDIA_ERR_NETWORK, networkState = idle void return call with a null argument throws an exception call with no argument throws an exception call with type is empty string returns false call when type is empty string returns false	
2,2 MediaSource i	sTypeSupported()	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=true, fires error and updateend events, updating changes to false call with type = "decode", with updating=talse, no appendBuffer done yet, fires an error event on the video element, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=false, some appendBuffer done already, fires an error event on the video, video.error = MEDIA_ERR_NETWORK, networkState = idle void return call with a null argument throws an exception call when type is empty string returns false	
2.2 MediaSource i	sTypeSupported()	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	paths are not possible) call with no argument works, check that readyState changes to "ended", and that "sourceended" event is fired call with type = "network", no appendBuffer done yet, an error event is fired on the video element, that networkState = no source and video.error is set to MEDIA_ERR_SRC_NOT_SUPPORTED, call with type = "network", some appendBuffer done already, fires an error event on the video element, video.error = MEDIA_ERR_NETWORK, networkState = idle call with type = "decode", with updating=flue, fires error and updateend events, updating changes to false call with type = "decode", with updating=flase, no appendBuffer done yet, fires an error event on the video element, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED, networkState = no source call with type = "decode", with updating=flase, some appendBuffer done already, fires an error event on the video, video.error = MEDIA_ERR_NETWORK, networkState = idle void return call with a null argument throws an exception call with no argument throws an exception call with type is empty string returns false call when type is a valid MIME string w/ random values returns false call when type is a valid MIME string w/ random values returns false	

	1 call with a supported type returns true	
2.2 MediaSource removeSourceBuffer()	1 call with a null argument throws an exception	
	1 call with no argument throws an exception	
	call with an argument of a different type throws an exception call with a SourceBuffer of a different MediaSource object throws	
	1 NOT_FOUND_ERROR	
	call when updating, changes of update to false, fires abort and updateend	
	1 events on the SourceBuffer object	
	1 removing a sourceBuffer containing only one audio track, enabled	
	1 removing a sourceBuffer containing only one audio track, disabled	
	removing a sourceBuffer containing only one video track, selected removing a sourceBuffer containing only one video track, not selected	
	removing a sourceBuffer containing only one text track, not selected removing a sourceBuffer containing only one text track, showing	
	1 removing a sourceBuffer containing only one text track, hidden	
	1 removing a sourceBuffer containing only one text track, disabled	
	removing a sourceBuffer containing one audio and one video track, not	
	1 enabled, not selected	
	removing a sourceBuffer containing one audio and one video track, enabled, 1 not selected	
	removing a sourceBuffer containing one audio and one video track, not	
	1 enabled, selected	
	removing a sourceBuffer containing one audio and one video track, enabled, 1 selected	
	1 removing a SourceBuffer containing more than 2 tracks	
2.3 MediaSource Events	0 sourceopen fired (tested in other tests)	
	0 sourceended fired (tested in other tests)	
	0 sourceclose fired (tested in other tests)	
2.4.1 MediaSource attachment	1 attaching on a video element using src	
	1 attaching on a video element using source.src	
	1 attaching on a audio element using src	
	1 attaching on a audio element using source.src	
	attaching a MediaSource when it is in the "open" state, fires an error event, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED and networkState =	
	1 no_source	
	attaching a MediaSource when it is in the "ended" state, fires an error event, video.error = MEDIA_ERR_SRC_NOT_SUPPORTED and networkState =	
	no_source	
	detaching a MediaSource from a video element changing src, fires a	
2.4.2 MediaSource detachment	sourceclose event, readyState=closed, duration=NaN, activeSourceBuffers 1 empty, sourceBuffers empty (and any number of removesourcebuffer event)	
	(detaching from a source element are not relevant as source elements	
	1 changes are ignored per HTML)	
	1 detaching a MediaSource from an audio element changing src	
	seeking when all of the objects in activeSourceBuffers have media data for the new playback position fires timeupdate and seeked events and seeked =	
2.4.3 Seeking	1 false	mediasource-duration.html
	seeking when one or more of the objects in activeSourceBuffers is missing media data for the new playback position sets video.readyState =	
	HAVE_METADATA but no event is fired	
	appending first init segment fires loadedmetadata and video.readyState =	
2.4.4 SourceBuffer Monitoring (Regular playback)	1 HÂVE_MĒTADATA	
	appending init segment + media segment with presentation time greater than 1 0 fires updateend and video.readyState = HAVE_METADATA	
	appending init segment + media segment with presentation time greater	
	starting at 0 and lasting exactly MediaSource.duration fires updateend and 1 canplaythrough event and video.readyState = HAVE_ENOUGH	
	appending sufficient data from an HAVE_CURRENT_DATA state resumes	
	1 playback	
	appending init segment + media segment with presentation time greater starting at 0 but with only 1 frame fires loadeddata and updateend events and	
	1 video.readyState = HAVE_CURRENT_DATA and playback is paused	
	appending init segment + media segment with presentation time greater	
	starting at 0 but with only N frames, fires canplay and updateend events and video.readyState = HAVE_FUTURE_DATA	
	unselecting a video track when the track is the only track in its sourceBuffer,	
2.4.5 Changes to selected/enabled/hidden/showir	1 fires removesourcebuffer/addsourcebuffer on activeSourceBuffers	
	unselecting the selected video track when the track is the only video track in	
	its sourceBuffer (e.g. contains additional audio track), does not fireremovesourcebuffer on activeSourceBuffers, fires addsourcebuffer on	
all tests check that the order of SourceBuffer obje	1 activeSourceBuffers	
	unselecting the selected video track and selecting another video track in the same sourceBuffer, does not fire removesourcebuffer and addsourcebuffer	
	1 on activeSourceBuffers	
	disabling an audio track alone in its sourceBuffer, fires removesourcebuffer	
	on activeSourceBuffers disabling an audio track with an other disabled audio track in its sourceBuffer,	
	fires removesourcebuffer on activeSourceBuffers	
	disabling an audio track with an other unselected video track in its	
	1 sourceBuffer, fires removesourcebuffer on activeSourceBuffers disabling an audio track with an other enabled audio track in its sourceBuffer,	
	fires absence of removesourcebuffer on activeSourceBuffers	
	enabling an audio track alone in its sourceBuffer, fires addsourcebuffer on	
	1 activeSourceBuffers enabling an audio track with an other disabled audio track in its sourceBuffer,	
	enabling an audio track with an other disabled audio track in its sourceBuffer, 1 fires addsourcebuffer on activeSourceBuffers	
	enabling an audio track with an other unselected video track in its	
	1 sourceBuffer, fires addsourcebuffer on activeSourceBuffers	
	enabling an audio track with an other enabled audio track in its sourceBuffer, 1 fires absence of addsourcebuffer on activeSourceBuffers	
	1 disabling a text track alone in its sourceBuffer	
	disabling a text track not alone in its sourceBuffer (no other	
	1 active/enable/selected track)	
	disabling a text track not alone in its sourceBuffer (other active/enable/selected tracks)	
	1 showing a text track alone in its sourceBuffer	
	showing a text track not alone in its sourceBuffer (no other	
	showing a text track not alone in its sourceBuffer (no other active/enable/selected track)	
	showing a text track not alone in its sourceBuffer (no other 1 active/enable/selected track) showing a text track not alone in its sourceBuffer (other	
	showing a text track not alone in its sourceBuffer (no other 1 active/enable/selected track) showing a text track not alone in its sourceBuffer (other 1 active/enable/selected tracks)	
	showing a text track not alone in its sourceBuffer (no other 1 active/enable/selected track) showing a text track not alone in its sourceBuffer (other	
	showing a text track not alone in its sourceBuffer (no other 1 active/enable/selected track) showing a text track not alone in its sourceBuffer (other 1 active/enable/selected tracks) 1 hiding a text track alone in its sourceBuffer	

2.4.6 Duration change	0 tested with the MediaSource.duration attribute	
2.4.7 End of stream algorithm	0 tested with MediaSource.endOfStream() calls	
3. SourceBuffer object	1 test calling a constructor fails	
3.1 appendWindowEnd	1 test value is +Infinity upon creation	
	1 test setting with +Infinity (unrestricted double)	
	test the setting on a SourceBuffer removed from its parent throws	
	1 InvalidStateError	
	1 test the setting while updating throws InvalidStateError	
	1 test setting with NaN throws InvalidAccessError	
	test setting to a smaller value than appendWindowStart throws	
	1 InvalidAccessError: positive value, negative value	
	test setting to the same value as appendWindowStart throws	
	1 InvalidAccessError (0, value > 0)	
	1 test successful setting does not add frames with timestamp above	
3.1 appendWindowStart	1 test setting +Infinity throws a TypeError	
Why no sentence for NaN ? because of unrestrict	1 test value is 0 upon creation	
Wily no sentence for Ivaliv : because of unlessifict	test the setting on a SourceBuffer removed from its parent throws	
	1 InvalidStateError	
	1 test the setting while updating throws InvalidStateError	
	1 test setting with a negative value throws InvalidAccessError	
	test setting with a negative value throws invalidaccesscribin	
	1 InvalidAccessError	
	test setting to the same value as appendWindowEnd throws	
	1 InvalidAccessError	
	1 test successful setting does not add frames with timestamp below	
3.1 audioTracks/textTracks/videoTracks	1 tests for XXXTrackList	
5.1 addio fracks/text fracks/video fracks		
	1 test read-only	
3.1 buffered	1 test read-only	
	test getting when the SourceBuffer is removed from its parent throws	
	1 InvalidStateError	
	1 test getting while updating does not throw	
	test getting for single track when it contains: no frame, 1 frame, N contiguous	
	1 frames, N non-contiguous frames	
	test getting for multiple tracks when: the intersection is empty, overlaps at the beginning, at the end, in the middle of one track	Side effect on getting. The track buffer should be updated when the readyState transitions to ender
		once encor on genting. The track burier should be updated when the ready-state transitions to ender
	1 test getting the length	
	1 test getting an entry	
3.1 mode	1 check initial value	
	1 test getting when the SourceBuffer is removed from its parent does not throw	
	test setting when a SourceBuffer removed from its parent throws	
	1 InvalidStateError	
	1 test the setting while updating throws InvalidStateError	
	test setting mode to segments when the media format does not use	
	1 timestamps throws InvalidAccessError	
	test the order of Exception (InvalidAccessError throws instead of	
	1 InvalidStateError): 2 cases	
	1 test the setting when the readyState of the MediaSource is closed	
	1 test the setting when the readyState of the MediaSource is open	
	test the setting when the readyState of the MediaSource is ended, check the	
	1 sourceopen event and change of readyState	
	test changing the AppendMode from "segments" to "sequence" while in the	
	1 middle of parsing a media segment throws InvalidStateError	
	test changing the AppendMode from "sequence" to "segments" while in the	
	1 middle of parsing a media segment throws InvalidStateError	
	test successful append in "segments" mode: continous range, discontinuous	
	1 range, overlap, with and without timestampOffset	
	test successful append in "sequence" mode: continous range without	
0.41	1 timestampOffset, discontinuous range, overlap, with timestampOffset	
3.1 timestampOffset	1 test initial value is 0	
	1 getting with the SourceBuffer removed from the MediaSource, does not throw	
	1 getting returns successfully	
	1 setting to +Infinity throws a TypeError	
	setting when the SourceBuffer is removed from the MediaSource throws	
	1 InvalidStateError	
	1 setting when the SourceBuffer is updating throws InvalidStateError	
	1 setting when in closed state	
	1 setting when in open state	
	1 setting when in ended state, check sourceopen event and change in state	
	1 setting when half a frame is parsed, throws InvalidStateError	
	setting when half an initialization segment is parsed, does not throw 1 InvalidStateError	
	1 setting in sequence mode offsets the frame	
	1 setting in segments mode offsets the frame	
3.1 trackDefaults	1 check empty initial value	
	1 getting return empty	
	1 getting return non empty	
	1 setting when SourceBuffer is removed throws InvalidStateError	
	1 setting when SourceBuffer is updating throws InvalidStateError	
0.4	1 successful update in open, ended, closed modes	
3.1 updating	1 read-only	
	1 check false on creation	
	1 getting when updating from appendBuffer	
	1 getting when updating from remove	
	1 getting when updating from appendStream	
	1 getting when in closed mode	
	1 getting when in open mode	
	1 getting when in ended mode	
	1 getting when SourceBuffer is removed from the parent	
3.2 abort()	1 check passing random argument does not throw	
	1 check void return	
	call when SourceBuffer is removed from the MediaSource throws	
	1 InvalidStateError	SourceBuffer-abort-removed.html
	1 call when the MediaSource is "ended" throws InvalidStateError	SourceBuffer-abort-readyState.html
	1 call when the MediaSource is "closed" throws InvalidStateError	
	all when not updating throws InvalidStateError, check appendWindowStart	

	call when updating from appendBuffer, check abort and updateend event and	
	updating change to false, appendWindowStart set to 0 and 1 appendWindowEnd to +Infinity	SourceBuffer-abort-updating.html
	call when updating from appendStream, check abort and updateend event
