<i>This spreadsheet contains metadata about scripts, as described below. The data is "best available" (especially for historic scripts), and may change over time.</i>				
Column Heading	Description	Derivable from UCD		Related links
WR	Web Rank: the rank of this script from a large sample of the web, in terms of the number of characters found in that script. Below 32 the ranking is not statistically significant.	no		
Name	Script Name (long script value)	yes		
Script_Code	Script Name (short script value)	yes		
Age	Which version of Unicode this script first appeared in. Derived from Age and Script properties	yes		<a href="http://goo.gl/xiVi">http://goo.gl/xiVi</a>
Size	The number of Unicode 6.0 characters of this script that are NFKD. Derived from UCD properties	yes		
Sample	A sample character for use in "Last Resort" style fonts, as a representative character in collation indexes, etc. It should be - representative (makes one think of this script) - unique (does not look like it's from another script) - recognizable (a common letter of the script) - a letter, ideally a consonant (never punct/symbol)	no		<a href="http://unicode.org/policies/lastresortfont_eula.html">http://unicode.org/policies/lastresortfont_eula.html</a>
Sample_Code	The codepoint for the sample character	no		
Origin country	Where this script originate? The modern country whose boundaries best matches the region where the script originated it. For readability in the chart, it is the name of the country/region, not the code.	no	*Moved Philippine scripts to match book; Coptic and Thaana to match geography	<a href="http://unicode.org/charts/">http://unicode.org/charts/</a>
~Density	What is the approximate information density of characters in this script?	no	1 for small scripts, 2 for larger, 3 for huge. Probably should be deprecated, but needs tool change.	
Likely Language	What the most likely language is, in the absence of an other information. For readability in the chart, it is the name of the country/region, not the code.	no		<a href="http://unicode.org/repos/cldr-tmp/trunk/diff/supplementa">http://unicode.org/repos/cldr-tmp/trunk/diff/supplementa</a>
Lang_Code	BCP 47 language subtag for the likely language	no		
ID Usage (UAX31)	What is the usage for IDs (tables 4-7) according to UAX #31?	UAX31 text		<a href="http://unicode.org/reports/tr31/#Table_Candidate_Char">http://unicode.org/reports/tr31/#Table_Candidate_Char</a>
RTL?	Is the script RTL? (Does it have at least one RIAL letter?)	yes		<a href="http://goo.gl/XXfE">http://goo.gl/XXfE</a>
LB letters?	Do the major languages using the script have linebreaks between letters (excluding hyphenation). Derived from LB property.	yes	Basically scripts like Thai and Chinese that don't need spaces between words.	<a href="http://goo.gl/iY1m">http://goo.gl/iY1m</a>
Shaping Req?	For the major languages using that script, do characters require shaping for adequate display quality of NFC text? - This includes not only ligation (and Indic conjuncts), Indic vowel splitting/reordering, and Arabic-style contextual shaping, but also cases where NSM placement is required, like Thai. - A "min" value means that NSM placement is sufficient, not the more complex shaping (and the NSM placement may not be necessarily for all languages using the script).	no		
IME?	Do the major languages using the script require IMEs? - In particular, are users (of languages for that script) accustomed to using IME (such as Japanese) -- to the extent that typical commercial products for those languages would need IME support in order to be competitive? - Note: it may be useful in the future to add multiple values to this column, with some gradations among input such as: - plain keyboard (no dead-keys; eg English), stateful keyboard (dead-keys; eg Czech), simple IME (no options, just combination; eg Hangul), full IME (eg Japanese, Chinese).	no		
Has Case?	Does the script have a case distinction? Both uppercase and lowercase letters?	yes
