The <b>relations</b> , <b>entitites</b> and <b>instances</b> sheet contains list of terms in ontology. The terms that are highlighted as red are new custom terms required for the current application. The rest of the terms are imported from existing ontologies.
The column names in the <b>relations</b> , <b>entitites</b> and <b>instances</b> sheet are read by csv-to-owl mapper in the github pipeline and hence should remain same. But they can be configured from <a href="#">mapping.ttl</a> file
The <b>ontology-plugin-config</b> sheet contains configuration information that is used by attached google apps script for tracking used IRI counts and ontology version with which the ontology is pushed to the configured github repository. The apps script reads the configuration information from the specific cells at the exact range location. The cell locations can be changed from the apps script.
The link to the github repository to which the ontology is pushed can be configured from the attached apps script. The github repository should have the pipeline established to map csv to owl, user can fork <a href="https://github.com/TW-Genesis/genesis-csv-to-owl-mapper.git">https://github.com/TW-Genesis/genesis-csv-to-owl-mapper.git</a> for establishing the pipeline.
User needs to create a copy of this sheet to be able to run and see the attached apps script.
Additional comments are added in the attached apps script.
