Infrastructure level = the level of infrastructure in the region
Daily full line production = the daily output of 15 factories building on 1 factory
1CIC build time = is the time it takes to build 1 Cic in days
1 infrastructure construction speed difference = how much faster you would build it if you upgraded the infrastructure by 1 level
1 infrastructure added breakeven = this is the amount of CIC you need to build before you will start building faster than if you hadn't upgraded your infrastructure.
