

By Jonah Ostroff

This is a gallery of things you can do in Google Sheets that are helpful for puzzle hunts.

The first few tabs (in **gray**) contain practical advice that you can implement without too much practice.

The later **orange** tabs contain advanced examples. Don't feel like you have to learn how to reproduce them! Instead, the examples are meant to show what's possible.

If you're solving a puzzle and feel like some Sheets wizardry would make it easier, there's probably someone around who will be happy to implement it. Just ask!

Want your own version of this sheet to mess with? Choose File -> Make a copy.

Date	Change
11/4/2023	Added VIGENERE, SUBTRACT_LETTERS, ALTERNATING_LETTERS, and BINARY_WOF to Named Functions.
1/8/2024	Added a changelog.
	Added COUNT_ONLY to Named Functions.

General tips/conventions

Put answers (to clues, puzzles, etc.) in a monospace font like `Courier New` or `Consolas` so it's easier to notice things about their lengths.

Capitalize clue answers you're pretty sure about. Put them in lowercase (perhaps with a "?") if you're not at all confident.

Use formulas to avoid errors in indexing. MID() and (sometimes) REGEXREPLACE() are the main tools you need here.

If you have a hunch you want to explore, make (and name!) a new column in the sheet to try it out so other people can see what you're doing.

Or, if it's complicated to implement, duplicate the tab and try it on your own. Name it something like "[Your name]'s sheet".

Setting up a puzzle

If your text is awkward to copy directly into a sheet (this happens a lot when copying from PDFs), paste it in a text editor first to clean it up.

Consider using **View -> Freeze** if you have some rows or columns that should remain visible as you scroll.

Sometimes it's easier to insert an image from the puzzle instead of trying to duplicate it exactly.

Once you've set up your sheet, **check the original puzzle again to see if there's anything you haven't copied!**

Lists of things

Got a big table that you're not sure how to extract from? Use **Data -> Create a filter** to put it in a filter.

This makes it much easier to resort it as you try new things.

Before you sort a list, make a column ("Orig.", say) to note its original order so you can recover it later!

If you decide that a column isn't useful, hide it instead of deleting it in case you change your mind later.

When a column is based on another column, use formulas to compute it wherever possible so that your edits propagate.

If someone else has set up formulas in a table, **don't overwrite them!** Please check that a cell is actually empty before you type in it.

Similarly, if you set up a formula in a table, make it hard to overwrite! Either change the formatting to indicate that it's special, or use **Data -> Protected sheets and ranges** to protect it.

If you have notes about some items in a list, put them in a new column so it's easier to track (and so they don't get lost when the list is sorted).

If you'd like to mark items in your list as used, it's often easier to use checkboxes or (where appropriate) conditional formatting instead of manual highlighting.

Checkboxes

To make a checkbox, choose **Insert -> Checkbox**.

Checkboxes are interpreted as true or false based on whether they're checked, so it's easy to use them in formulas.

For example, the contents of the cell below change depending on whether the box is checked:

The box is unchecked.

And this text box uses conditional formatting to turn green when the box is checked.

To see how that works, select the above cell and choose **Format -> Conditional Formatting**.

Crossword puzzles

Make two grids: one for letters, and one for numbers.

Use conditional formatting to shade a cell in the number grid whenever the corresponding cell in the letter grid is filled.

Use lowercase letters for answers/letters you're not sure about.

Logic puzzles

There are lots of ways you can use conditional formatting to make logic puzzles smoother in sheets (see "Some logic puzzles").

However, if it's a standard genre or can easily be represented as one, consider using puzz.link instead.

Find the genre on <https://puzz.link/list.html>, set up your puzzle, then use **File -> Network Play** to generate a coop link to share with your team.

Helpful Shortcuts

ctrl+shift+V	Pastes values only (good for copying from webpages, or for pasting without disrupting conditional formatting)
ctrl+alt+V	Paste <i>formatting</i> only (without altering cell contents)
alt+shift+1,2,3,4	Places a border on the top, right, bottom, or left of a cell (respectively)
alt+shift+6	Removes borders from a cell
alt+shift+7	Adds all borders around a cell (or block of cells)
ctrl+Y	"Redo", but if you haven't undone anything it'll repeat your most recent action in the current cell. Good for highlighting lots of things.

Helpful Sheets Formulas

LEN(S)	Returns the length of S
MID(S, n, m)	Returns the substring of S of length m starting at the nth position. Useful for indexing.
SUBSTITUTE(S, R, T)	Returns the string S, but with every substring R replaced by the string T.
REGEXREPLACE(S, R, T)	Returns the string S, but with every substring matching regular expression R replaced by the string T. See the Intro to REGEXREPLACE tab for specific uses.
CONCATENATE([list])	Concatenates all of the things in [list]. (Don't use CONCAT().)
IF(P, A, B)	Returns A if P is true, B if P is false
UPPER(S)	Returns S, but with all lowercase letters capitalized
COUNTIF(R, S)	Returns the number of cells in range R that match S
CHAR(N)	Returns the symbol whose ASCII code is N. Note: A=65, so add 64 to go from 1-26 to A-Z.
CODE(X)	Returns the ASCII code of the letter X. Often useful combined with CHAR above.
MOD(n, m)	Returns n mod m. So =CHAR(MOD(CODE("A") - 65 + n, 26) + 65) will Caesar shift A by n.
ISBLANK(C)	Returns TRUE iff cell C is blank. (Mostly useful for conditional formatting.) Can also use A1<>"" to test if A1 is the empty string.
VLOOKUP(), INDEX(), MATCH()	Okay these are complicated, but generally useful for looking up cells in one place and copying them to another.
ARRAYFORMULA()	Also pretty complicated, good for applying a rule to every letter of a string.

Having trouble with a formula? Google Sheets will display the correct syntax as you enter it, and you can click [Learn more](#) to see more details.

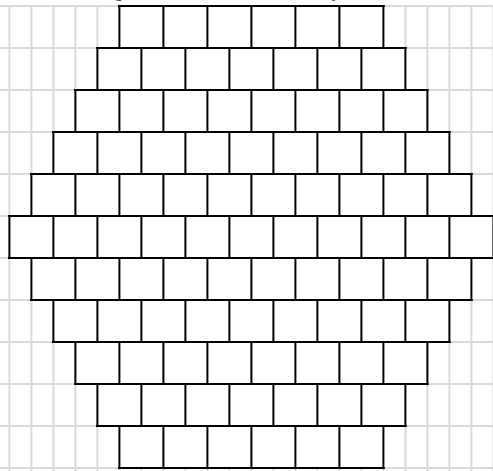

When solving cryptic clues, it's helpful to indicate in your answers how the wordplay works. This makes it easier for others to check your work.

Feel free to use your own convention if you think it will be clear! This is just a suggested set of indicators.

This notation has the nice side effect that the letters in the final answer are exactly the capital letters. This makes it easier to index, find lengths, etc.

Notation	Mechanic	Answer	Clue	Source
	+ Concatenation	YEN+T+A	36 Long time a blabbermouth (5)	<i>Silk, Send Off Copies</i>
	* Anagram	MILE*	43 More than 5,000 feet squashed lime (4)	<i>Trazom, Baker's Dozen Theme and Variations</i>
	() Grouping, insertion	T(RU)EST	10. Most accurate experiment involving ruthenium (6)	<i>Listener 4533, Telling Lies</i>
	< Reversal	EMIT<	40 Throw out newsmagazine retrospective	<i>Qaqaq, Matchmaker</i>
	- Subtraction	S(-h)AKE	36. Firm deal closer rejects hot sushi accompaniment	<i>Tinhorn, Plainly In The Maine</i>
WORD	Hidden word	_RA VIOL_	21 Italian eats extra violin string	<i>Halpin, Do I Hear a Waltz?</i>
X_	First letter, etc.	FIR_	1. Douglas, e.g., opening letters from firstborn	<i>Bartók, Concerto For Orchestra</i>
(ddef)	Double definition	SALE (ddef)	18 Trade for Red Sox pitcher Chris (4)	<i>Tortoise, Dropping The Ball</i>
->	Replacement	POO(h->R)	5. Beggarly husband of Piglet's chum becomes red	<i>Ucaoimhu, The Second City</i>
("word")	Homophone	BELLE ("bell")	34 Beautiful girl sounding alarm	<i>Trazom, The Four Seasons</i>
(abbr.)	Other clue type	EDD (inits)	8 Announcer Hall initially emulates Dr. Demento	<i>Jangler, Rise to Power</i>
//	Ambiguity	TH_+OUGH(-_t) // TH_+O+R	24. But half of them ought to strike right character of "might"	<i>Ucaoimhu, Full House</i>
[[]]	Puzzle-specific gimmick (e.g. extra letter from wordplay)	S[[m]]LAB<	7. Back ointments put on thickly	<i>Harth, Party!</i>

Need a hex grid? Just make tiny cells and merge them.

Triangular grids are harder. Try using internal borders.

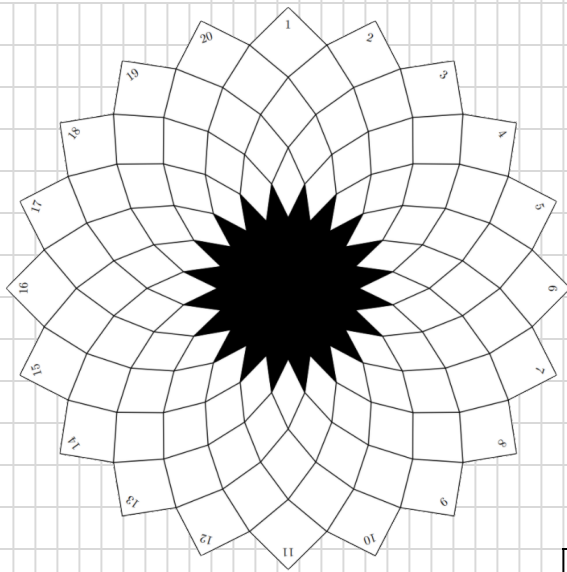

For example, this grid:

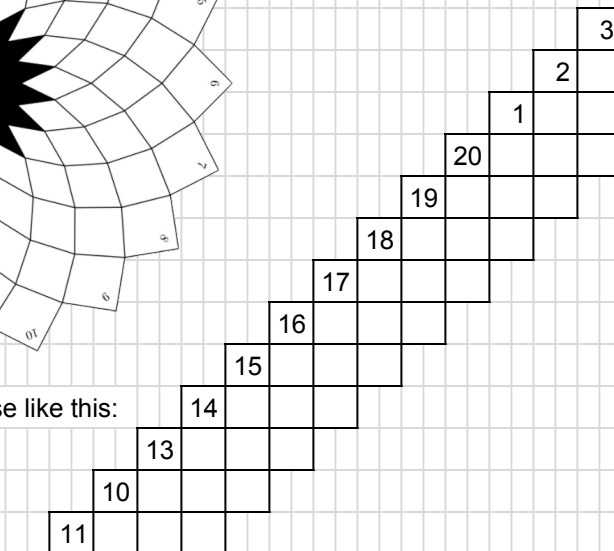

is topologically equivalent to this:

Petal puzzles like this...

can be "unwrapped" onto a staircase like this:

Clockwise clues read across,
counterclockwise clues read down.

Here are some things you can do with REGEXREPLACE.			
This isn't as scary as it looks!			
You don't need to learn the entirety of regular expression syntax.			
99% of the time you'll just be using [,], and ^.			
Short summary: a regular expression is a shorthand notation for strings that follow a particular pattern.			
The regular expression [ABC][DEF] means "any two-letter string whose first letter is A, B, or C, and whose second letter is D, E, or F". Strings like AD, BE, and BF would be said to "match" that regular expression.			
[^AB] means "any character that's <i>not</i> A or B".			
With REGEXREPLACE, we can find all of the substrings in a cell that match a pattern, and replace them with something else.			
Example 1: answer cleaning			
<u>A string:</u>	Pack my box with five dozen liquor jugs.		
<u>Cleaned up:</u>	PACKMYBOXWITHFIVEDOZENLIQUORJUGS		
What happened here? First, we used UPPER() to make all of the lowercase letters capital.			
Then, REGEXREPLACE got rid of everything that wasn't a capital letter.			
Specifically, "[^A-Z]" means "any single character that isn't a letter between A and Z".			
Our REGEXREPLACE function removed all characters of that type, leaving behind just the letters.			
(If you're just removing spaces, SUBSTITUTE also works for this. Use REGEXREPLACE if there are punctuation marks, etc.)			
Example 2: indexing			
<u>A string:</u>	Pack my box with five dozen liquor jugs.		
<u>An index:</u>	17		
<u>Indexed letter:</u>	E		
Here we cleaned up the answer (just like before), then passed it into MID().			
MID(string,index,1) then returned 1 character starting at the index-th position of string.			
The cleaning step is important! Otherwise your index will include spaces, punctuation, etc.			
Example 3: deleting			
<u>An almost-pangram:</u>	Pack my box with four dozen liquor jugs.		
<u>The alphabet:</u>	ABCDEFGHIJKLMNOPQRSTUVWXYZ		
<u>The missing letter:</u>	V		
This time, we used the almost-pangram as part of the regular expression!			
The regular expression "[PACK MY BOX WITH FOUR DOZEN LIQUOR JUGS.]" matches any letter in that sentence.			
Then we deleted all of those letters from the alphabet, and only V was left.			
Note the symbol "&" concatenated the strings "[", "PACK MY BOX WITH FOUR DOZEN LIQUOR JUGS.", and "]".			

CYCLIC_ORDER	<p>Sorts a table of data (with two columns denoting consecutive entries) into a cyclical order.</p> <p>Technical notes:</p> <ul style="list-style-type: none"> From should be filled. It's ok to have gaps in To. Outputs pieces if To has gaps. Breaks if the data contains >1 loop. <p>(Note: because we're missing 3 Tos, the output is in three pieces.)</p>	<table border="1"> <thead> <tr> <th>Country</th> <th>Capital</th> <th>Next in list</th> </tr> </thead> <tbody> <tr><td>Armenia</td><td>Yerevan</td><td></td></tr> <tr><td>Burkina Faso</td><td>Ouagadougou</td><td>Fiji</td></tr> <tr><td>Canada</td><td>Ottawa</td><td>Armenia</td></tr> <tr><td>Djibouti</td><td>Djibouti</td><td>Gabon</td></tr> <tr><td>Estonia</td><td>Tallinn</td><td></td></tr> <tr><td>Fiji</td><td>Suva</td><td>Estonia</td></tr> <tr><td>Gabon</td><td>Libreville</td><td>Hungary</td></tr> <tr><td>Hungary</td><td>Budapest</td><td></td></tr> <tr><td colspan="3">Output:</td></tr> <tr><td>Burkina Faso</td><td>Ouagadougou</td><td>Fiji</td></tr> <tr><td>Fiji</td><td>Suva</td><td>Estonia</td></tr> <tr><td>Estonia</td><td>Tallinn</td><td></td></tr> <tr><td>Canada</td><td>Ottawa</td><td>Armenia</td></tr> <tr><td>Armenia</td><td>Yerevan</td><td></td></tr> <tr><td>Djibouti</td><td>Djibouti</td><td>Gabon</td></tr> <tr><td>Gabon</td><td>Libreville</td><td>Hungary</td></tr> <tr><td>Hungary</td><td>Budapest</td><td></td></tr> </tbody> </table>	Country	Capital	Next in list	Armenia	Yerevan		Burkina Faso	Ouagadougou	Fiji	Canada	Ottawa	Armenia	Djibouti	Djibouti	Gabon	Estonia	Tallinn		Fiji	Suva	Estonia	Gabon	Libreville	Hungary	Hungary	Budapest		Output:			Burkina Faso	Ouagadougou	Fiji	Fiji	Suva	Estonia	Estonia	Tallinn		Canada	Ottawa	Armenia	Armenia	Yerevan		Djibouti	Djibouti	Gabon	Gabon	Libreville	Hungary	Hungary	Budapest

You know those puzzles where you have two lists of clues, or maybe one list of clues and another list of things they should match?

Formulas and conditional formatting can make it significantly easier to keep track of which items you've paired, or whether your matches actually work.

For example, in this puzzle you can type your answer in column C, and automatically see whether its digits (as written on a phone) match something in the bank.

(By Tirralmo, who made this when I complained that all the examples I could think of would spoil an existing hunt puzzle.)

Clue	Answer	Digits	Bank	Lookup table
Awaken			276873	A 2
Impotent	UNABLE	862253	346948	B 2
Showed surprise			427733	C 2
Idiot	DUMMY	38669	727437	D 3
Sword			752837	E 3
Hawk, e.g.	FALCON	325266	862253	F 3
				G 4
				H 4
				I 4
				J 5
				K 5
				L 5
				M 6
				N 6
				O 6
				P 7
				Q 7
				R 7
				S 7
				T 8

W	H	A	T	S	O	E	V	E	R
F	O	R	M	I	D	A	B	L	E

It's also good for highlighting letters in an extraction grid.

You know, those crosswords where all the clues are split in half, and the grid numbers tell you the sums of the clue numbers?

Here's how VLOOKUP and conditional formatting can make it easier.

Source: https://www.nytimes.com/premium/xword/Sep0411_2.pdf

Enter numbers here to copy the fragments over

(Sums turn red if they're not satisfied.)

Use the filter to move used clues to the bottom.

(Don't hide them, or you'll hide rows from crossword grid tool)

Number grid shades in as you fill out the upper grid:

Sum	#1	#2	Clue	Answer
9	6	3	Disney Deer	BAMBI
14	9	5	Sin Of party for men	
22	13	14	College whose name is an anagram of Dream	MADRE

Acrostics are always kind of a pain to set up in Sheets, but here's one way to do it:

1. Browning's Sonnet 43, e.g. (2 wds.)	124 75 13 3 28 27 52 41
2. Dish of potatoes (2 wds.)	24 19 103 126 10 89 79 116 105 9 34
3. Drink made from grapes	31 92 65 106
4. Drink with milk and fruits	108 42 62 60 73 32 66 100
5. Electrical appliance that makes people or things cool down	61 49 44
6. Footwear	102 43 76 56 114
7. Handwear	18 104 67 133 136 139
8. Kind of fish	130 118 137 128
9. Kind of tablet	98 25 125 91
10. Large, printed pictures	81 115 59 111 14 48 86
11. Official procedure or system of rules	22 53 71 51 132 45 78 119
12. Pendant that brings fortune (2 wds.)	74 72 94 77 90 50 82 17 70 113
13. Picture holder (2 wds.)	88 2 85 120 33 16 6 123 135 26
14. Pocket change (2 wds.)	84 23 87 110 38 58 15 57 68 7
15. Small bag	4 69 21 117 46
16. Small house animals	131 83 39 30
17. Soft paper	138 12 93 55 121 134
18. Something the audience throws to the stage during Ig Nobel Prize Ceremony (2 wds.)	96 47 63 5 122 8 29 80 99 112
19. The page number of a printed book	107 20 97 95 40
20. Unisex clothing (hyph.)	11 101 35 54 37 1
21. You write it and keep it to yourself	127 64 36 129 109

Step 1: Make a grid like the above.
Put "#"'s (or some other symbol) in all the black squares. We'll need them later.

Step 3: Set up the extraction grid as shown above. Here's what it's doing:
First, the IF checks whether the corresponding square in the number grid is a # sign. If so, leave this blank.
If not, take the table of letters and FLATTEN it into a long array.
Then use FILTER to only find the cell immediately below the one that matches the correct number.
Do this by comparing a FLATTENed table one row higher with the corresponding cell in the number grid.
Note: if your acrostic is the kind with cells like "A124" instead of "124", replace Y3 in the formula with VALUE(RIGHT(Y3, LEN(Y3)-1)).

Step 2: Make a table where you'll put your answers, like this.

↓

Source: <https://2019.galacticpuzzlehunt.com/puzzle/reunited.html>

In a puzzle with a long list of words that must be matched or transformed, conditional formatting and formulas can make extraction faster and less error-prone.

Unhide columns F, J, and K to see what's going on.

This will spoil how the puzzle works.

Answer	Clue	Num	Answer	Clue	Enum
CART	Helpful device for shopping	4	SENTIMENT	Tender or romantic emotion	9
	Pirate's storage container	1	THAILAND	Country in Southeast Asia	9 ← One non-spoilery feature: automatic enumeration checking.
	Test version	1		Benjamins	9
	Currency denomination smaller than a dollar	1		Someone with a lot of property	9
