Chain Reaction

Your Lean Web3 management action plan

chain3action.substack.com/

Pillar of Lean	Level 1: Beginner - Initial Exploration	Level 2: Intermediate - Practical Application	Level 3: Advanced - Optimization and Sustenance
Elimination of Waste (Muda)	Identify obvious wastes in your process and eliminate or reduce them.	Simplify your internal processes at maximum ( ).	Identify and eliminate resource wastage : for example list all your SaaS subscriptions ( ).
Value Creation	Identify the value your Web3 project provides and to whom.	Prioritize the development of features based on user demand ( ) ans stay focus.	Redefine the value proposition your project to better address user needs ( ).
Value Stream	Create a basic value stream map of your project's current state.	Map current workflows to identify unnecessary steps ( ).	Optimize the value stream to enhance flow and reduce lead time.
Pull System	Identify areas where a pull system could be implemented.	Implement a mechanism to track user demand and launch new features accordingly ( ).	Implement demand-based planning to efficiently manage resources ( ).
Continuous Improvement (Kaizen)	Encourage feedback and make small improvements.	Encourage continuous innovation by organizing brainstorming sessions ( ).	Foster a culture of continuous improvement by regularly training the team in new technologies and methodologies ( ).
