

Windows alternatives to TortoiseHg Workbench	Unified interface showing history and changes/working directory at same time	History display shows recent changes for all branches, including commit graph	Commit dialog stays open so you can commit again without having to re-open it	Selectively commit chunks	Edit files directly	Free	Interface clean and easy to read?	Other
TortoiseHg Workbench								
TortoiseGit			If you use the obscure "ReCommit" option, in which case you can't use "Commit and Push" to push at the same time.					
GitHub Desktop	Must click between Changes and History			Yes, although not immediately obvious			Personally not a fan of history fields not being in columns	
GitKraken					"Edit this file" button takes you to the top of the file, very inconvenient	Free version is limited, can't use private repos		
Visual Studio 2019	4 clicks to go from Changes to View history							
SourceTree	1 click		?					Unreliable? I created a new branch, it doesn't show up in the left panel and when I went to commit and clicked "Stage all", nothing happened. GitKraken shows the new branch and the staged file. Also keep getting a crash dialog about Askpass.exe - a SourceTree component. And the icon doesn't show any more, just a default icon!
SmartGit		Doesn't show commits more recent than current branch	?	?	?	Free for non-commercial use	Diff view cluttered with grey lines when there are many small changes	Can't search in main window diff view
Fork	1 click		1 click to get back			\$49.99, free evaluation
