How to use it? First, make a copy of the spreadsheet to your google docs, then you can edit and use the update feature.
Also, you can edit the scripts to use your favorite exchange.

Notes:

1) There's a script that assings cell A1 a random value everytime the spreadsheet is edited. This is used to "force" google script to update the rates.

2) As I use brazilian exchanges to cash to fiat, I left some of those here just so people can use it the way they need.

3) If you need to change the sources, make sure to check your exchanges public API (usually its called ticker). Access the URL and see the returned values, and check the variables that you need to change. It's not a complicated script, that you can access using Tools > Script Editor.

4) To update the entire spreadsheet, edit something or just click an empty cell and hit delete.

5) If you feel like donating, I appreciate it! BTC: 1H5qHwwbePwrSwZZfUNAeoRUoF47pQ8ocB

	Don't get any ideas. None of the above addresses are mine. BTC ones are satoshi, and ETH ones are just an exchange's wallet and a random one.
