MACK'S INN ROUTE									
MT72	01_066WT		puddles	maybe just a bit further north than Jerry Brown marked it. This is 0.1-0.2 mile north of the Macks Inn intersection. There is series of several wood footbridges over areas damp in wet season. At the northern most bridge, it has more lush vegetation around it, look southwest and you'll see lush tall grass meadows. Walk down into the meadow about 50yd to find animal watering holes amongst the grass. I passed couple dry holes before finding water at one. It a little warm and stagnant but usable. Might be better if you try looking a little further downslope. PS there was also some very muddy water in potholes on fr066 as approach Reas Pass if your filter can handle it.	8/12/2014	Oops	44.43963	111.10367	poor
