

Diseases/Disorders with Potential for Cross-Over Impact Regarding Atypical HUS Research

Table 2: aHUS Alliance 2018

AAV: ANCA-associated vasculitis (ANCA: anti-neutrophil cytoplasmic Abs)	HAE: Hereditary Angioedema
AIHA: Autoimmune hemolytic anemia (Subtype: warm, or WAIHA)	HCT-TMA: HCT-TMA: Hematopoietic Stem Cell Transplant-Associated Thrombotic Microangiopathy
AMD: Age-related Macular Degeneration	HSCT: Hematopoietic Stem Cell Transplant
AMR: Antibody-mediated rejection	IBMIR: Instant Blood-mediated Inflammation Reaction
CAD: Cold Agglutinin Disease	IgAN: Immunoglobulin A Nephropathy (form of glomerulonephritis)
CAD: Coronary Artery Disease	IRI: Ischemia-Reperfusion Injury
CMV: Cytomegalovirus	LN: Lupus nephritis
C3G: C3 glomerulopathy Subtypes: Dense deposit disease (DDD) and C3 glomerulonephritis (C3GN)	MAHA: Microangiopathic Hemolytic Anemia
CMND: Complement-Mediated Neurodegeneration	MG: Myasthenia Gravis (gMG: generalized MG)
COPD: Chronic Obstructive Pulmonary Disease	MMN: Multifocal Motor Neuropathy
CVD: Cardiovascular Disease	MPGN: Membranoproliferative glomerulonephritis
DDD: Dense Deposit Disease (see also C3G)	NMOSD: Relapsing Neuromyelitis Optica Spectrum Disorder

DFG: Delayed Graft Function	PNH: Paroxysmal Nocturnal Hemoglobinuria
DITMA: Drug-Induced TMA	RA: Rheumatoid Arthritis
DM: Dermatomyositis	SLE: Systemic Lupus Erythematosus
GA: Geographic Atrophy (see AMD)	STEC-HUS Shiga toxin–releasing Escherichia coli - Hemolytic Uremic Syndrome
GBS: Guillain–Barré Syndrome	TMA: Thrombotic microangiopathy (often plural)
GvHD: Acute Graft v Host Disease	TTP : Thrombotic Thrombocytopenic Purpura

Note: Research done for other rare or complement-mediated diseases, or those with similar underlying mechanisms, may provide some degree of cross-over knowledge with potential to advance atypical HUS research and therapeutic drug discovery. Table 2, created by the aHUS Alliance May.
